## Bay Window Dimension Worksheet for Window Cornice Fabrication.

Measurements 1 thru 3 are taken along the wall surface between angle changes.

Measurement 4 is taken from end to end of the bay window opening along the plane of the room wall.

Measurements 5 and 6 will very likely be different because of construction error. Please provide both measurements from the point where the angle changes between windows and the plane of the room wall (outside the bay area).

Effort should be made to maintain accuracy of +/- 1/16" on all measurements.

Measurement 7 is the distance between the end of the window opening (or casing, if present) and the point at which the cornice should stop (assumes this measurement will be used at both ends).

**CALL 304-422-2669 if you have any questions about how to take these measurements.**
